CONNEXTIUM.XYZ / FINUX LABS

D-SHARE

Concept

Global equity.
Stablecoin access.

Tokenized depository receipts.
For USDC and HSBC RedCoin holders.

Depository Securities Homing Access
to Receipted Equity

Raising US$3 million

Connextium.xyz expansion programme

USDC / USD HSBC RedCoin / HKD

Global equities remain hard to access for many small investors

A whole share can cost more than an individual’s available investment budget.

US$1,000+

for one share in several globally listed companies

An investor with US$300

cannot buy one full share priced above US$1,000 through a whole-share-only service.

Access adds a second barrier

Eligible accounts, local distribution and funding routes vary by country and provider.

Fractional-share services already help some investors. Availability varies across brokers, customers and securities.

Six examples above US$1,000 per share

Indicative US-dollar quote snapshot, 30 October 2026. Prices change.

Company	Ticker	US$ per share
NVR Inc.	NVR	5,958.56
AutoZone	AZO	3,169.82
First Citizens BancShares Class A	FCNCA	2,352.64
Markel Group	MKL	1,869.82
Mettler-Toledo International	MTD	1,674.81
MercadoLibre	MELI	1,624.53

Each costs more than a US$300 whole-share budget

Examples illustrate unit prices. They are neither D-SHARE programmes nor investment recommendations.

Emerging-market access depends on local routes

Local investment institutions do not always offer the desired foreign market or product.

Account eligibility	Residency, identity checks and product permissions shape which accounts an investor can open.
International funding	FX rules, permitted remittances and provider requirements shape how an account can be funded.
Local distribution	An approved local partner must offer the receipt, explain rights and service the holding.

Example: India permits overseas portfolio investment under LRS, subject to its rules.

The launch plan selects permitted markets and distribution partners. Local securities and FX rules still apply.

Digital finance creates a distribution opportunity

Wallet and DeFi infrastructure supports a market thesis that needs local commercial validation.

35% to 42%

Digital merchant payments among adults in low- and middle-income countries, 2021 to 2024

World Bank Global Findex 2025

+9.8%

Latin America crypto economic activity, 12 months to June 2026 versus the previous 12 months

Chainalysis 2026 adoption report

D-SHARE opportunity

Connect eligible wallet users to approved equity receipts through accountable partners.

These indicators cover payments and crypto activity. DeFi use and D-SHARE demand require separate validation.

Leading payments engineering to capital markets

Connextium.xyz / Finux Labs product expansion vision

01

Payments foundation

Accounting and reconciliation
Partner payment integration
Cash and FX orchestration

02

D-SHARE expansion

Share-backed receipt programmes
Approved stablecoin funding
Custody-linked DLT records

03

Product growth

More equity receipt series
Additional permitted markets
Broader partner distribution

Phase A builds the first market-ready receipt programme. Additional markets and derivatives require separate readiness.

Global equity access for stablecoin adoption

Market adoption of stablecoin to invest in global equity through accountable financial structure.

D-SHARE aims to give ordinary investors smaller equity receipt units,
with global share exposure through approved local partners and cash rails.

First milestone

One issuer-sponsored programme, with an approved USDC route and gated RedCoin access.

D-SHARE

Concept

Depository framework

Depository Securities Homing Access to Receipted Equity

D Depository

S Securities

H Homing

A Access

R Receipted

E Equity

One token records one receipt unit. Custody and programme documents establish backing and holder rights.

1. Create the product

Fictional GlobalTech series GT-01. One token records one programme receipt unit.

US$1,200	0.01	US$12
Underlying share price	Share per receipt	Indicative receipt value

100 receipts represent one underlying share

Programme design

The sponsor sets the ratio and holder rights. Custody evidence supports issuance. Brokers distribute to eligible investors.

Illustrative value = share price × receipt ratio. Market quotes, fees, taxes and FX can change the actual price.

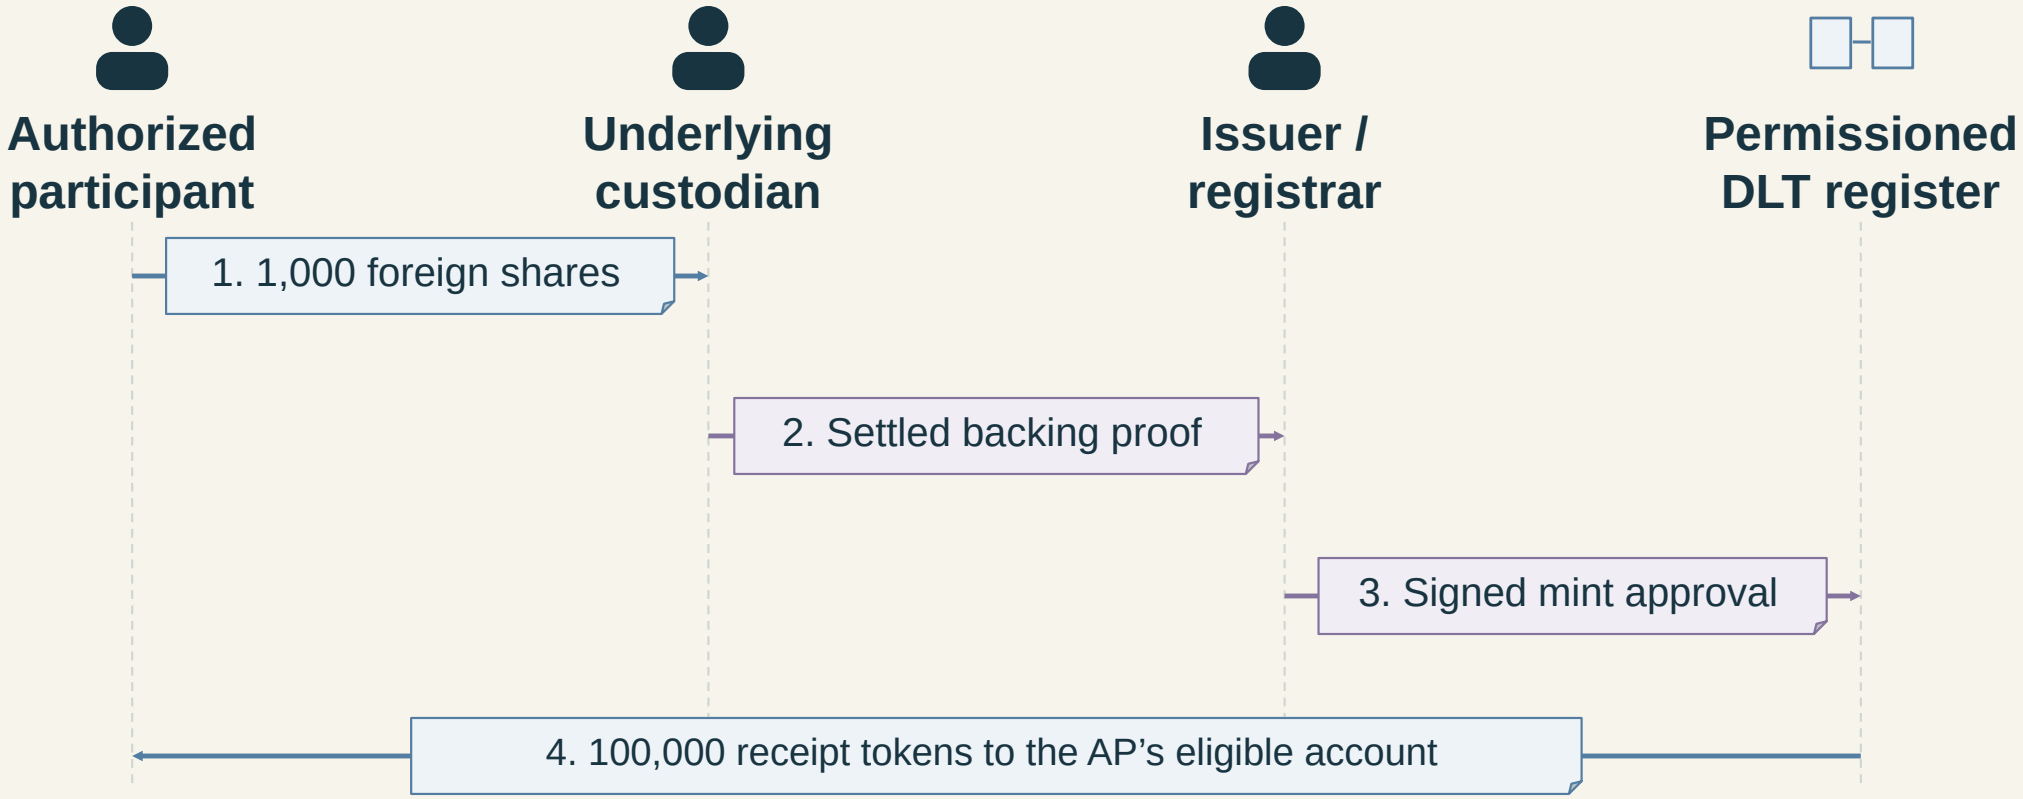

2. Issue receipts backed by shares

Illustrative: 1,000 shares / 0.01 share per receipt = 100,000 receipt tokens.

Blue = securities

Purple = instructions and confirmations

Green = stablecoin cash

Redemption: lock and cancel receipt units, burn tokens, then release the backing.

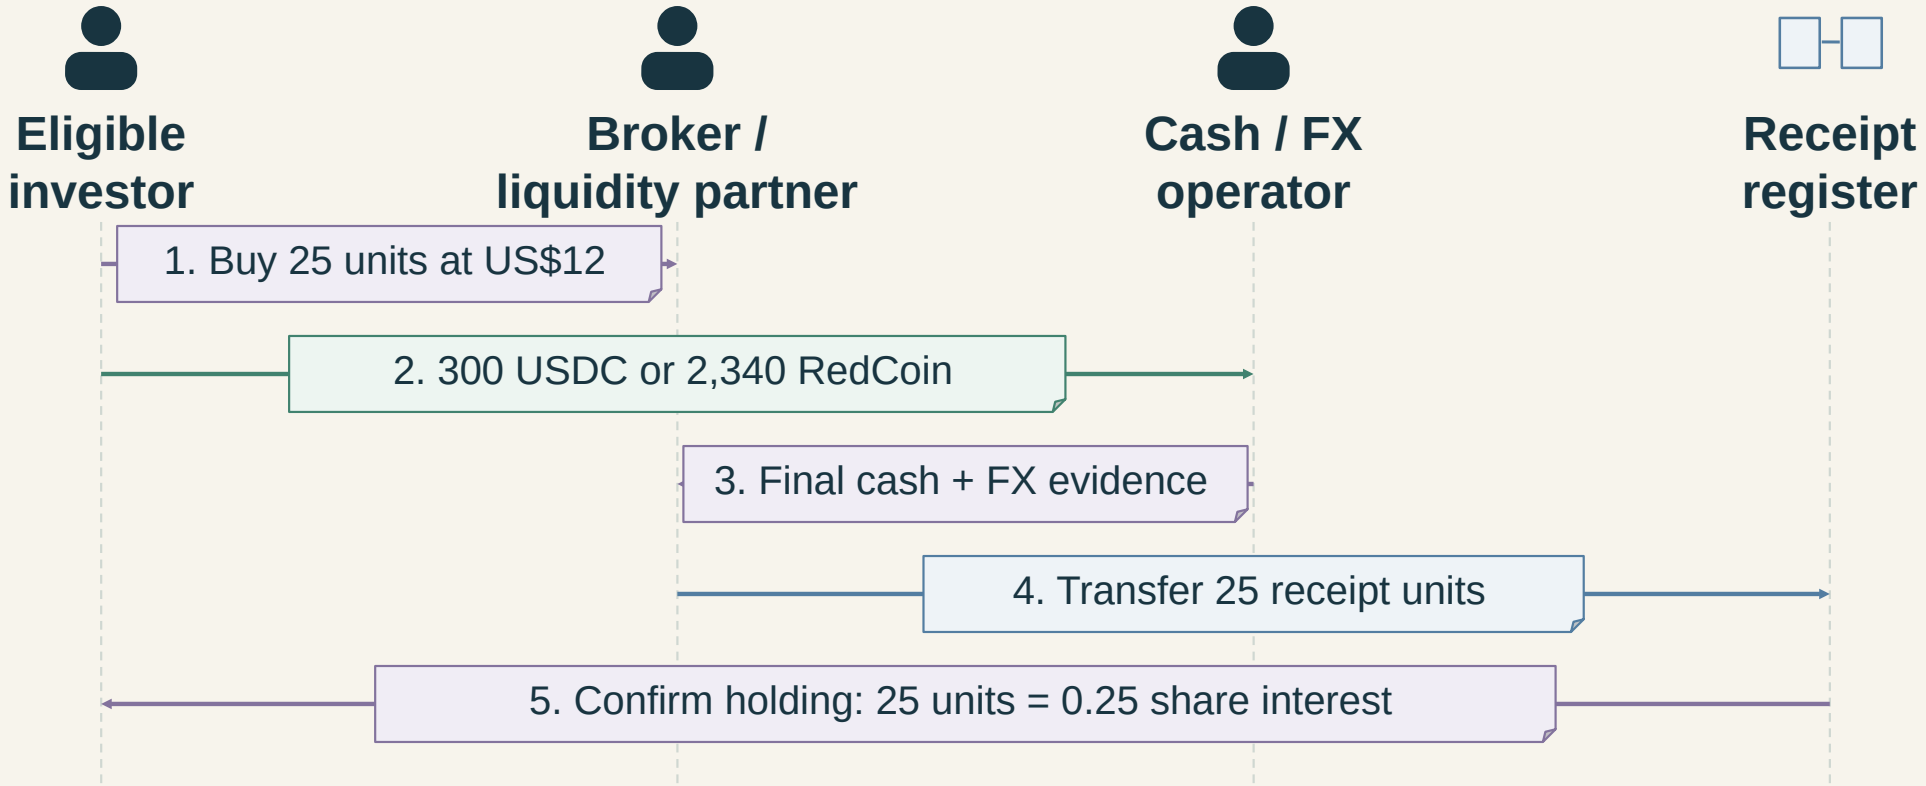

3. An investor buys HSDRs

HSDR is the earlier working name for a D-SHARE receipt unit in this illustration.

Blue = securities

Purple = instructions and confirmations

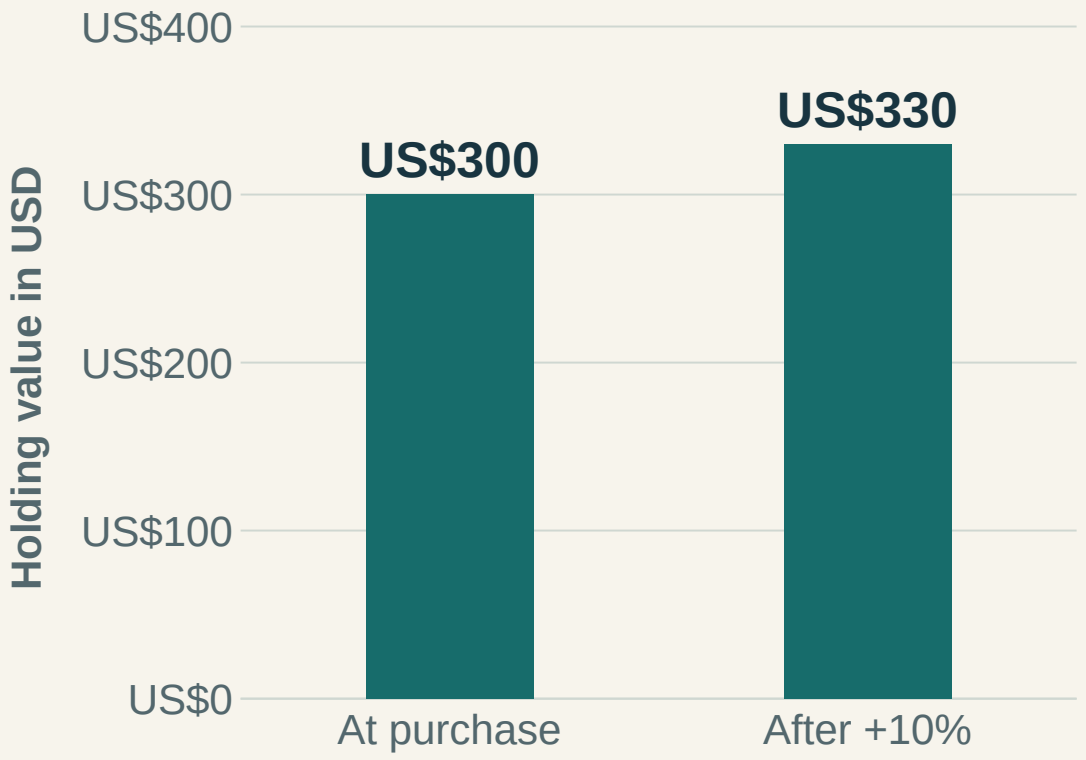

Green = cash or stablecoins

US$300 before fees. Assumes USDC/USD 1, RedCoin/HKD 1 and 7.80 HKD/USD. Rail access remains proposed.

4. The holding value rises in this example

Hypothetical positive scenario. Share price increases 10%, while 25 receipt units remain unchanged.

US$1,200 to US$1,320 per share

25 × 0.01 × US$1,320 = US$330

US$30 unrealized gain (+10%)

HKD reporting illustration	Value
Initial at 7.80 HKD/USD	2,340.00
Later at 7.82 HKD/USD	2,580.60
Change in HKD value	+10.28%

FX adds HK$6.60 versus an unchanged 7.80 rate.

Before fees and tax. A sale realizes cash proceeds. Equity and FX changes can also reduce value.

The operating gap in stablecoin-funded investing

An investment journey connects a funded wallet to enforceable asset rights and back.

For investors

Eligible holders need clear receipt rights, funding costs and a reliable route for distributions and redemption proceeds.

For programme partners

Sponsors need cash-asset evidence linked to custody, issuance and settlement, with servicing that reconciles each position.

Our discovery thesis

Partners will pay for a receipt programme that accepts approved stablecoin funding and reconciles the investment lifecycle.

Two cash ecosystems, one investment use case

External ecosystem scale supports discovery. Distribution and integration agreements remain ahead.

USDC / USD

38

Native USDC blockchain networks
Network and issuer availability vary

Circle, 16 September 2026

HSBC RedCoin / HKD

3.3M+

PayMe user base at RedCoin launch
Investment eligibility requires separate product access

HSBC, 23 October 2026

Our thesis: approved equity receipts can add an investment use case for stablecoin holders.

Ecosystem indicators only. Network reach and app users do not establish D-SHARE demand or serviced assets.

The investor journey

A broker presents one investment journey while specialist partners manage custody and settlement.

01	**Eligible account**	Broker checks investor eligibility and approved wallet or custody access.
02	**Clear order review**	Investor sees receipt units, equity value, funding asset, FX quote and charges.
03	**Visible settlement status**	The account shows cash acceptance, receipt delivery and any unresolved exception.
04	**Ongoing ownership**	Holder receives statements and distributions, then sells or uses an eligible redemption route.

Programme terms set investor eligibility, trading hours, redemption access and the available payout assets.

Investor and programme interfaces

Concept screens. Fictional GlobalTech data illustrates the information each user needs.

Broker order review

GlobalTech D-SHARE

Receipt units	**25**
Indicative unit value	**US$12.00**
Equity value	**US$300.00**
Funding asset / amount	**USDC / 300.00**

Charges and final execution quote appear before the investor confirms an order.

Programme operations

Receipt series GT-01

Issuance request	**100,000 units**
Settled backing	**1,000 shares**

Review queue

Backing confirmation received
Registrar approval pending
Mint action awaits dual authorization

Illustrative USDC/USD execution value 1.00. Fees excluded. These are proposed interfaces, with no live connectivity.

Institutional customers and distribution partners

Party	Value proposition	Commercial role
Issuer / depository	Launch stablecoin-funded receipt programmes	Target contracting customer
Broker / distributor	Wallet access and eligible investment distribution	Distribution partner
AP / liquidity provider	Create, redeem and quote receipts	Inventory and liquidity partner
Investor	Invest through approved USDC or RedCoin routes	End user through a broker

Illustrative first programme: 5 series × US$20M = US$100M serviced assets.

Asset adoption scenario only. Partner commitments and investor demand remain to be validated.

Market adoption through two cash ecosystems

One sponsor programme links eligible investment distribution with approved cash rails.

USDC adoption

Target regulated distributors and eligible accounts on one native USDC network.

RedCoin adoption

Seek HSBC investment access and an agreed broker distribution route.

Programme partners

Contract one issuer/sponsor, two brokers and two liquidity providers.

Target: five receipt series, with cash rails activated after certification.

A programme-level adoption case

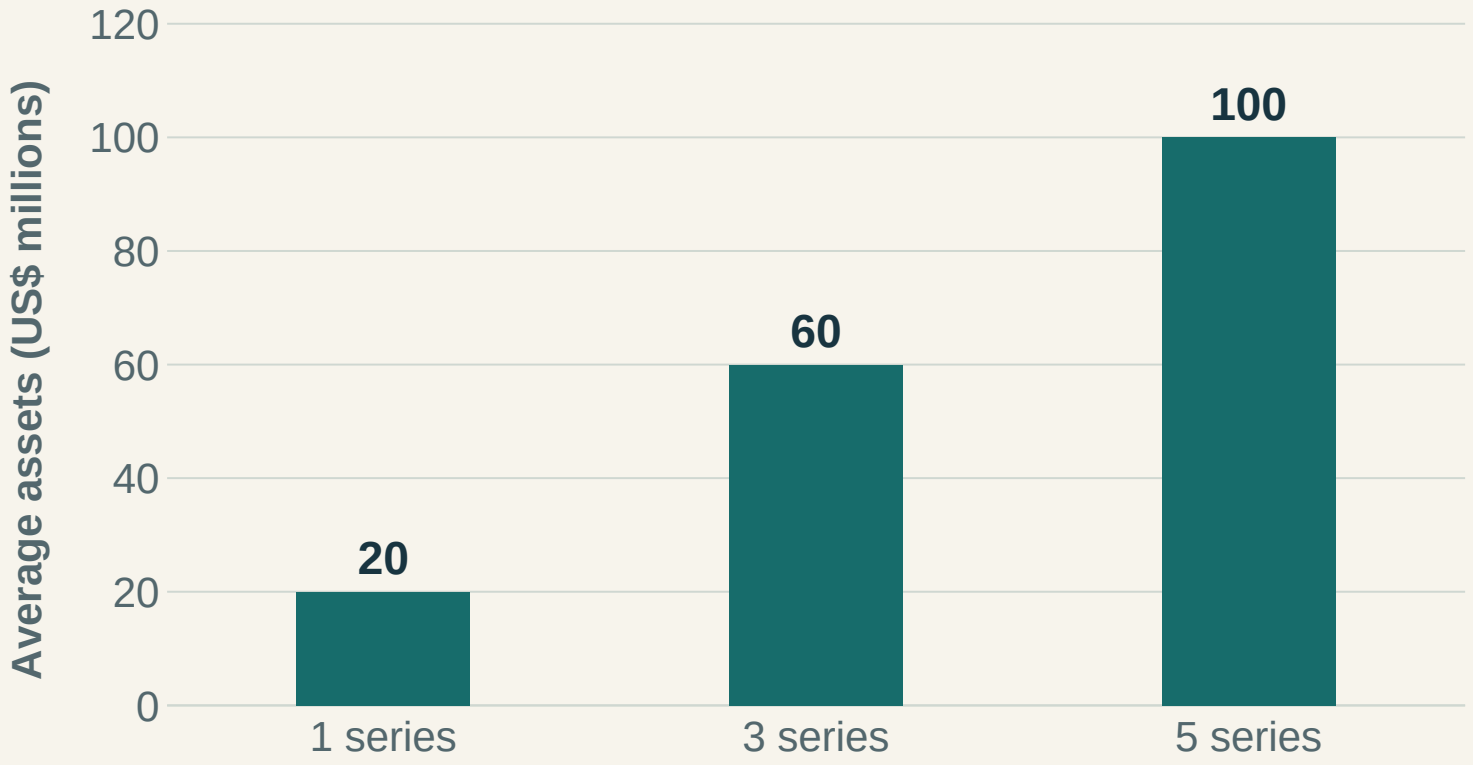

Planning sensitivity. Each series averages US$20M of serviced assets for a full measurement period.

5 series

US$100M average assets at US$20M per series

US$300,000

Annual gross servicing fees at the proposed 0.30% rate

Adoption scenario only. A launch-year ramp can produce much lower average assets than its ending balance.

Servicing economics at different asset levels

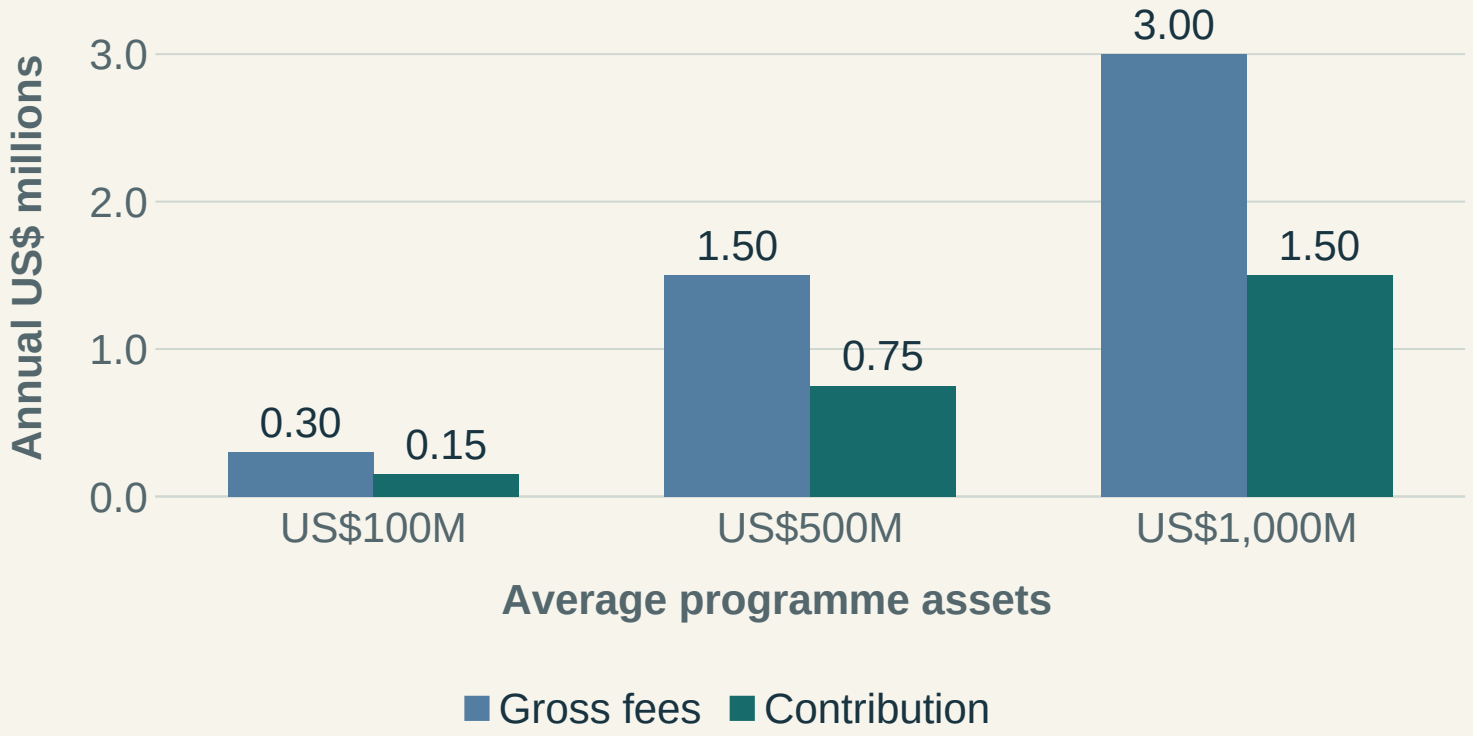

Illustrative annual economics in USD. Fees and partner costs remain uncontracted.

One sponsor contract

US$150,000 setup per new sponsor

0.30% annual servicing fee
0.15% variable service costs

Contribution covers fixed costs. Setup fees are excluded from this chart.

Before fixed costs. Stablecoin and FX charges require agreed partner and pass-through terms.

D-SHARE competes on programme execution

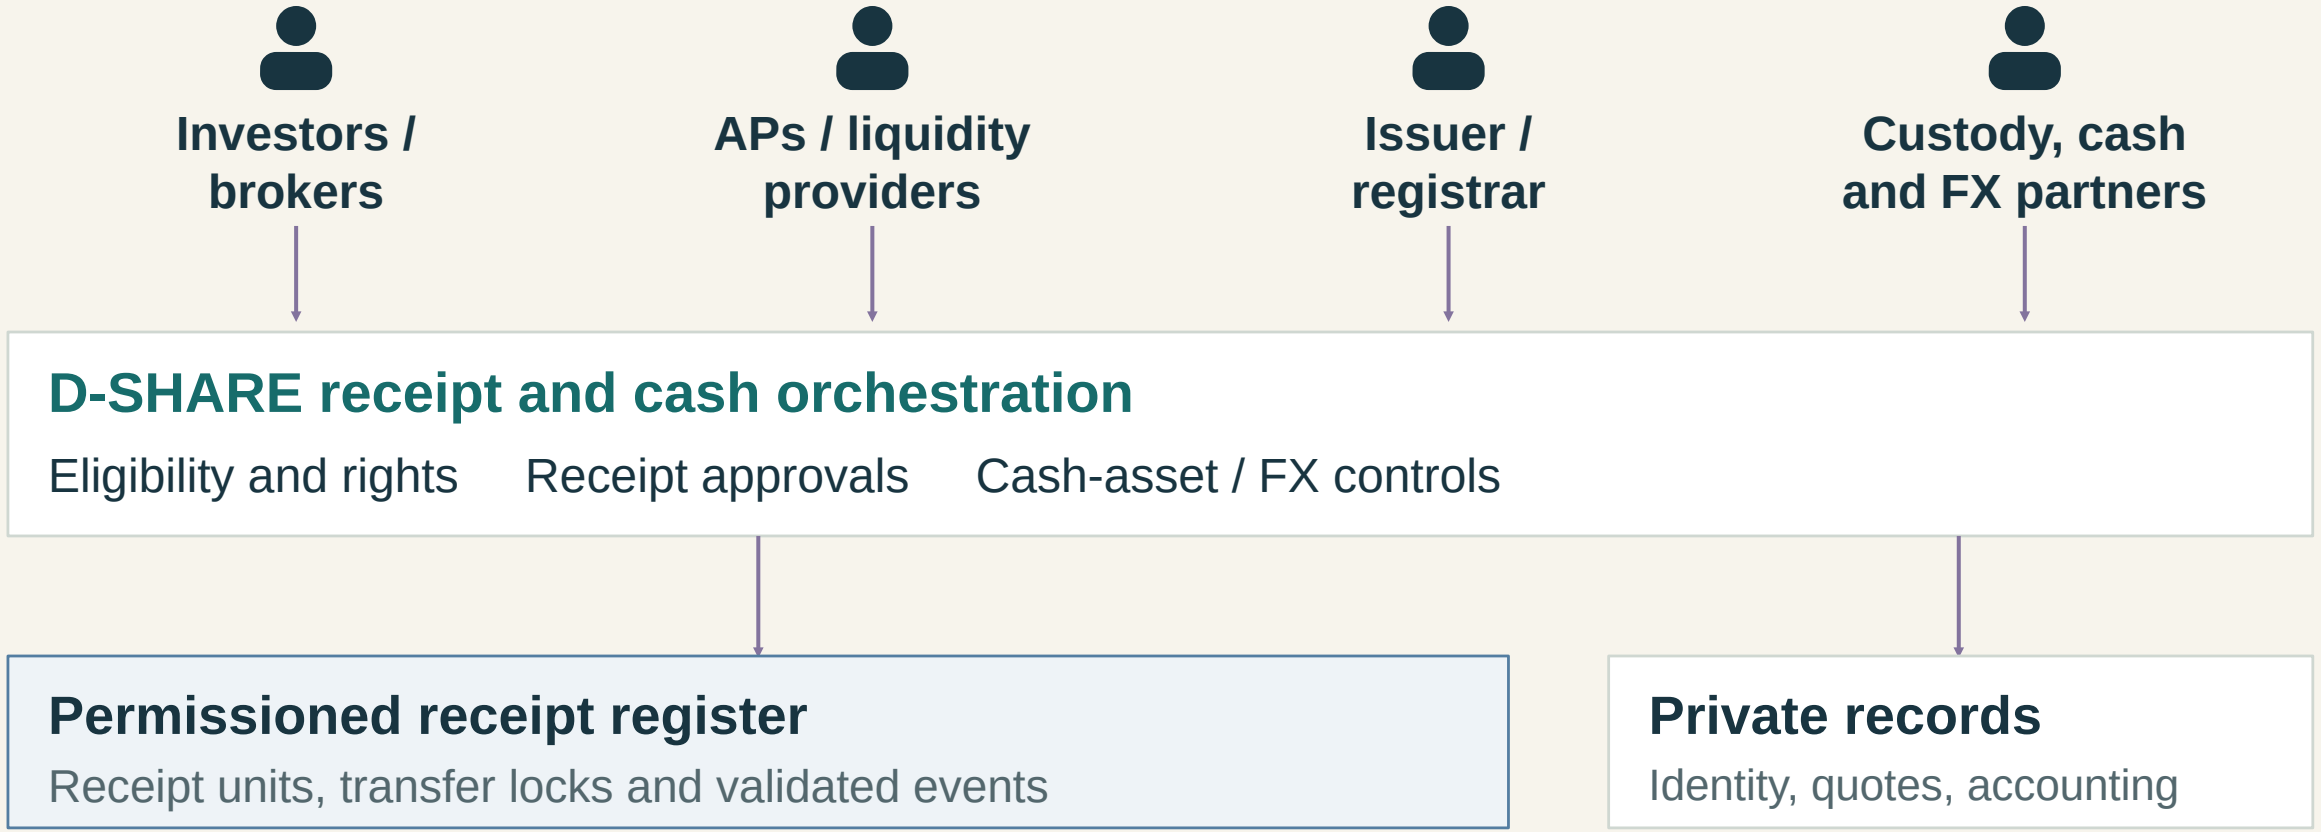

The proposed advantage must survive customer diligence and commercial comparison.

Route	Established value	D-SHARE's proposed response
Direct equity brokerage	Equity access through established brokers	Stablecoin funding with receipt servicing
Depository-receipt banks	Custody and issuer-servicing capabilities	USD receipt programme with cash adapters
Tokenization infrastructure	Digital records and tokenized entitlements	Focused receipt lifecycle and distribution
D-SHARE, proposed	Receipt product plus cash orchestration	USDC route and proposed RedCoin access

Validation test: a sponsor selects D-SHARE on service, economics and execution quality.

DLT architecture for the receipt lifecycle

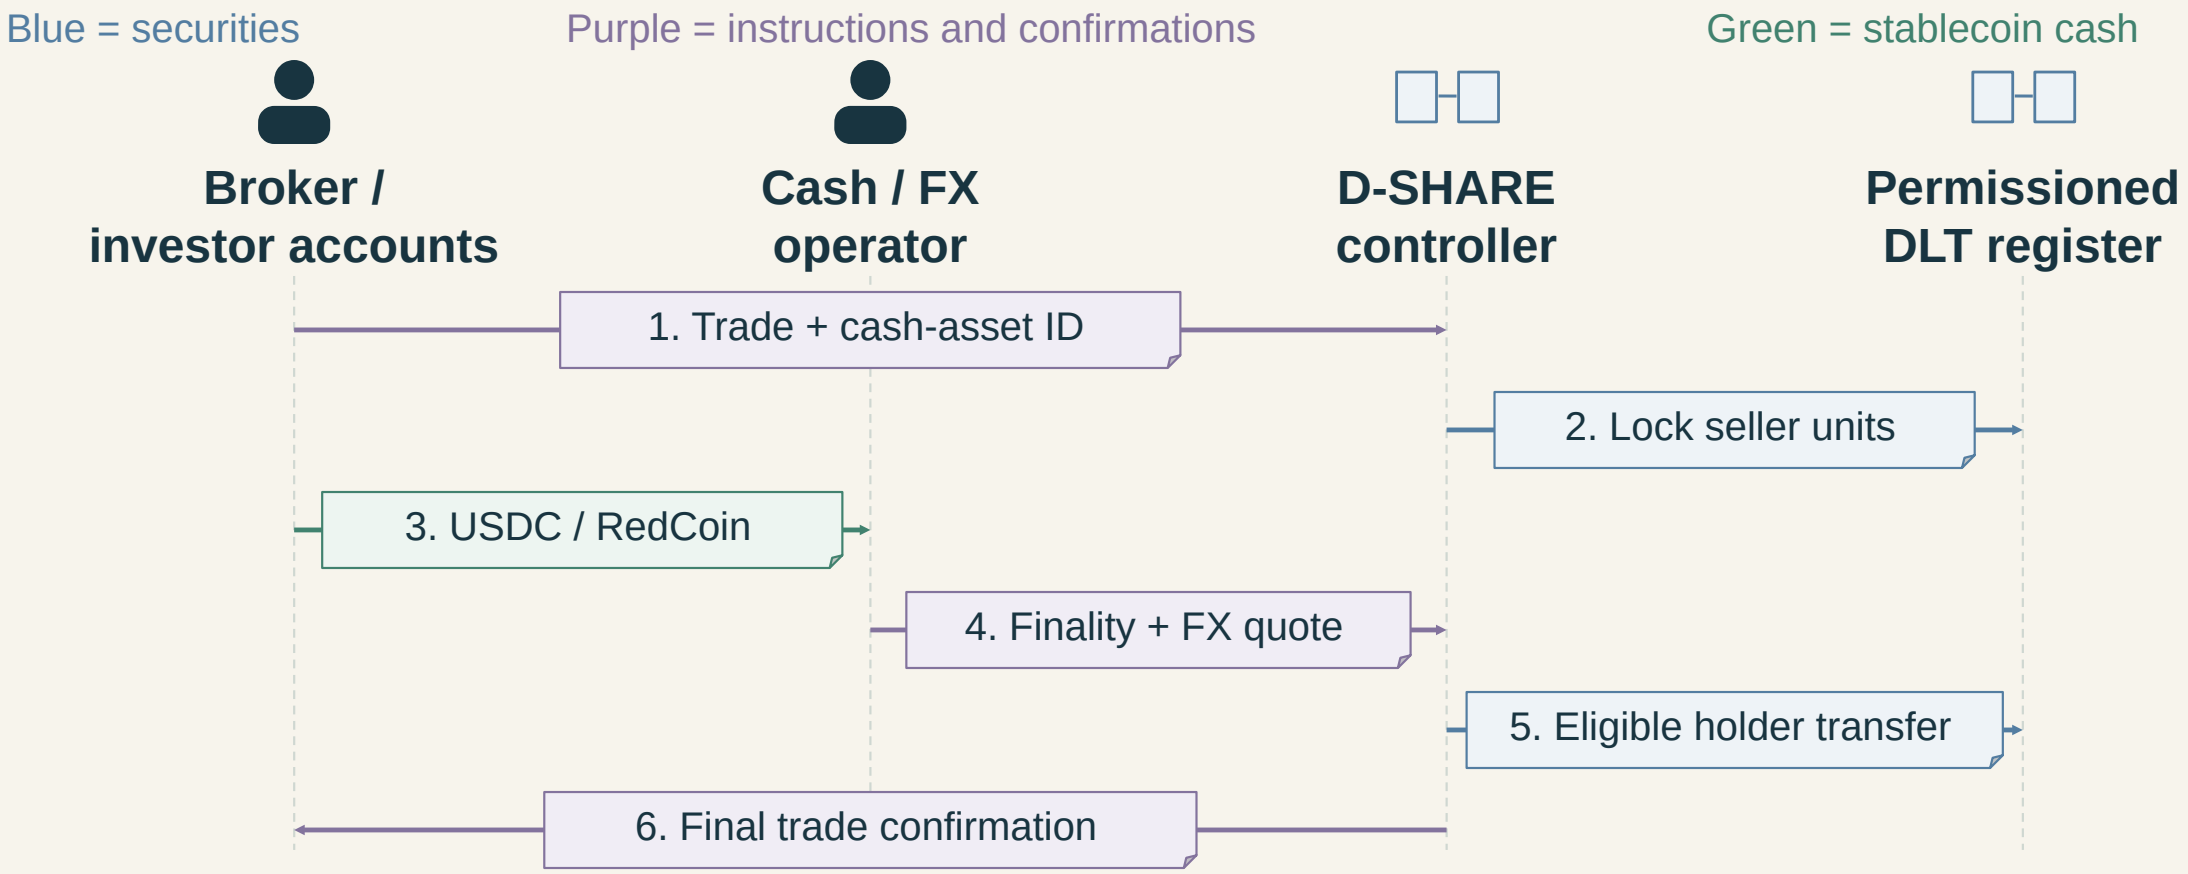

USDC and RedCoin adapters are proposed. Register rights and rail access remain launch gates.

Custodians hold shares. Cash partners transfer funds. Verified finality gates receipt release.

Receipt trade and stablecoin settlement

USDC / USD or RedCoin / HKD. Finality and FX checks gate receipt release.

Reconcile TradeID, CashAssetID, FXQuoteID and ReceiptTransferID. Failed legs enter recovery.

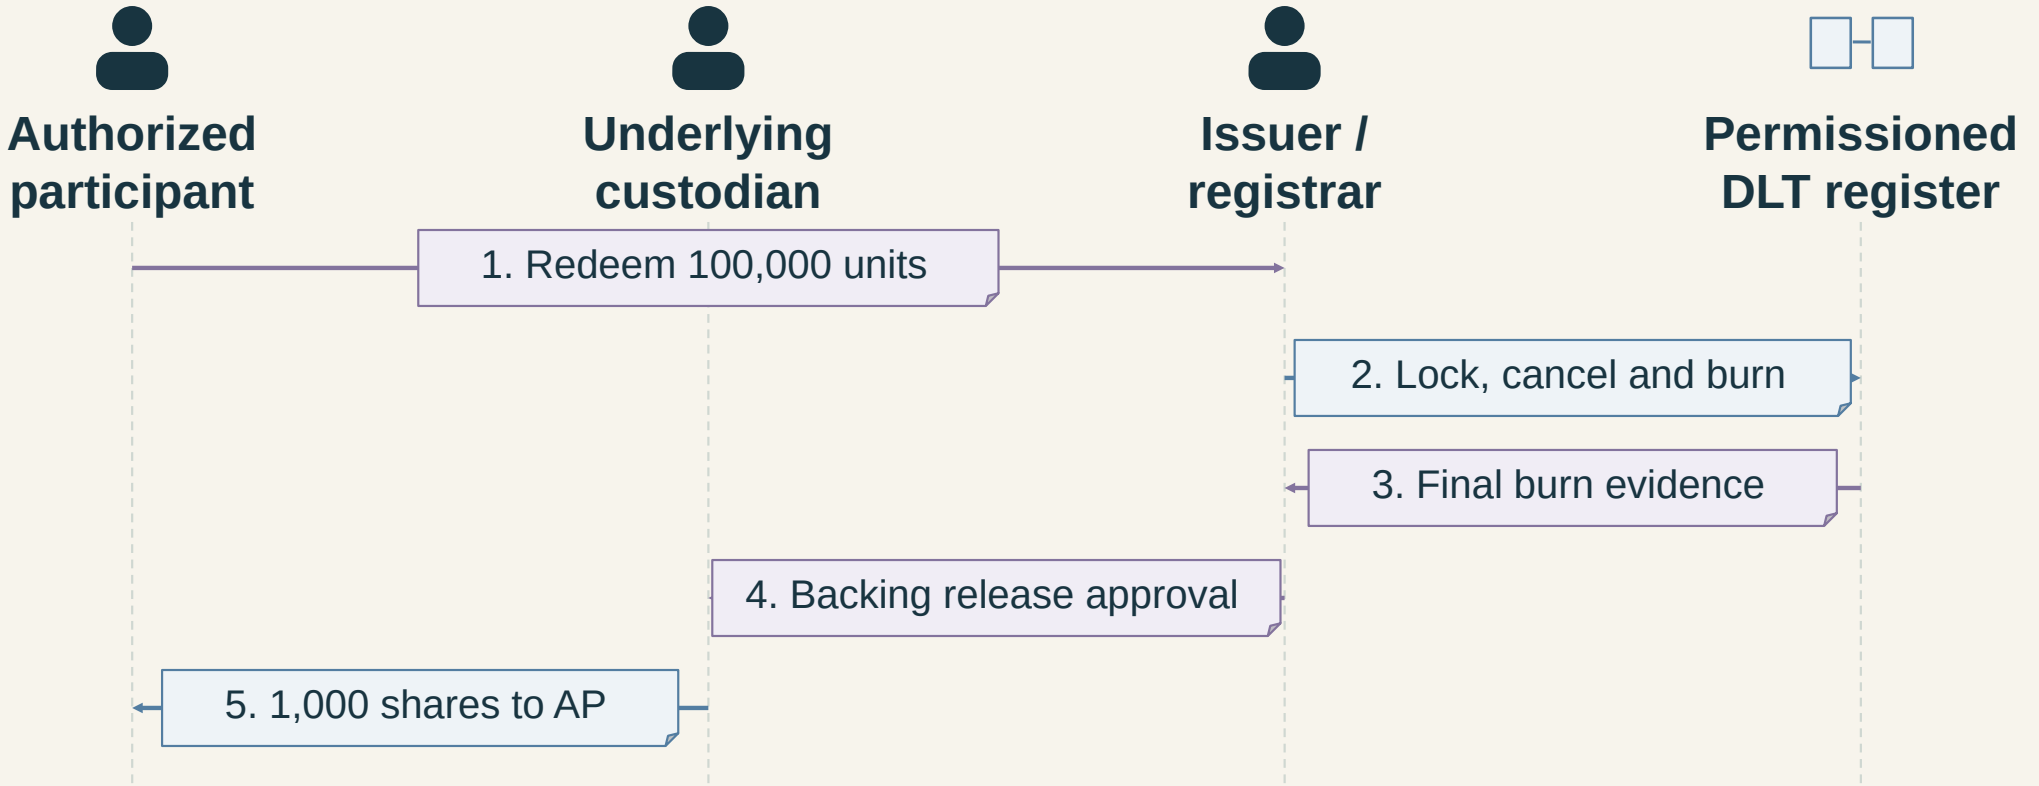

Receipt redemption and backing release

Illustrative AP redemption. At ratio 0.01, 100,000 cancelled units release 1,000 underlying shares.

Blue = securities

Purple = instructions and confirmations

Green = cash or stablecoins

Retail cash exits use a broker sale or an agreed conversion route. The programme defines direct-redemption eligibility.

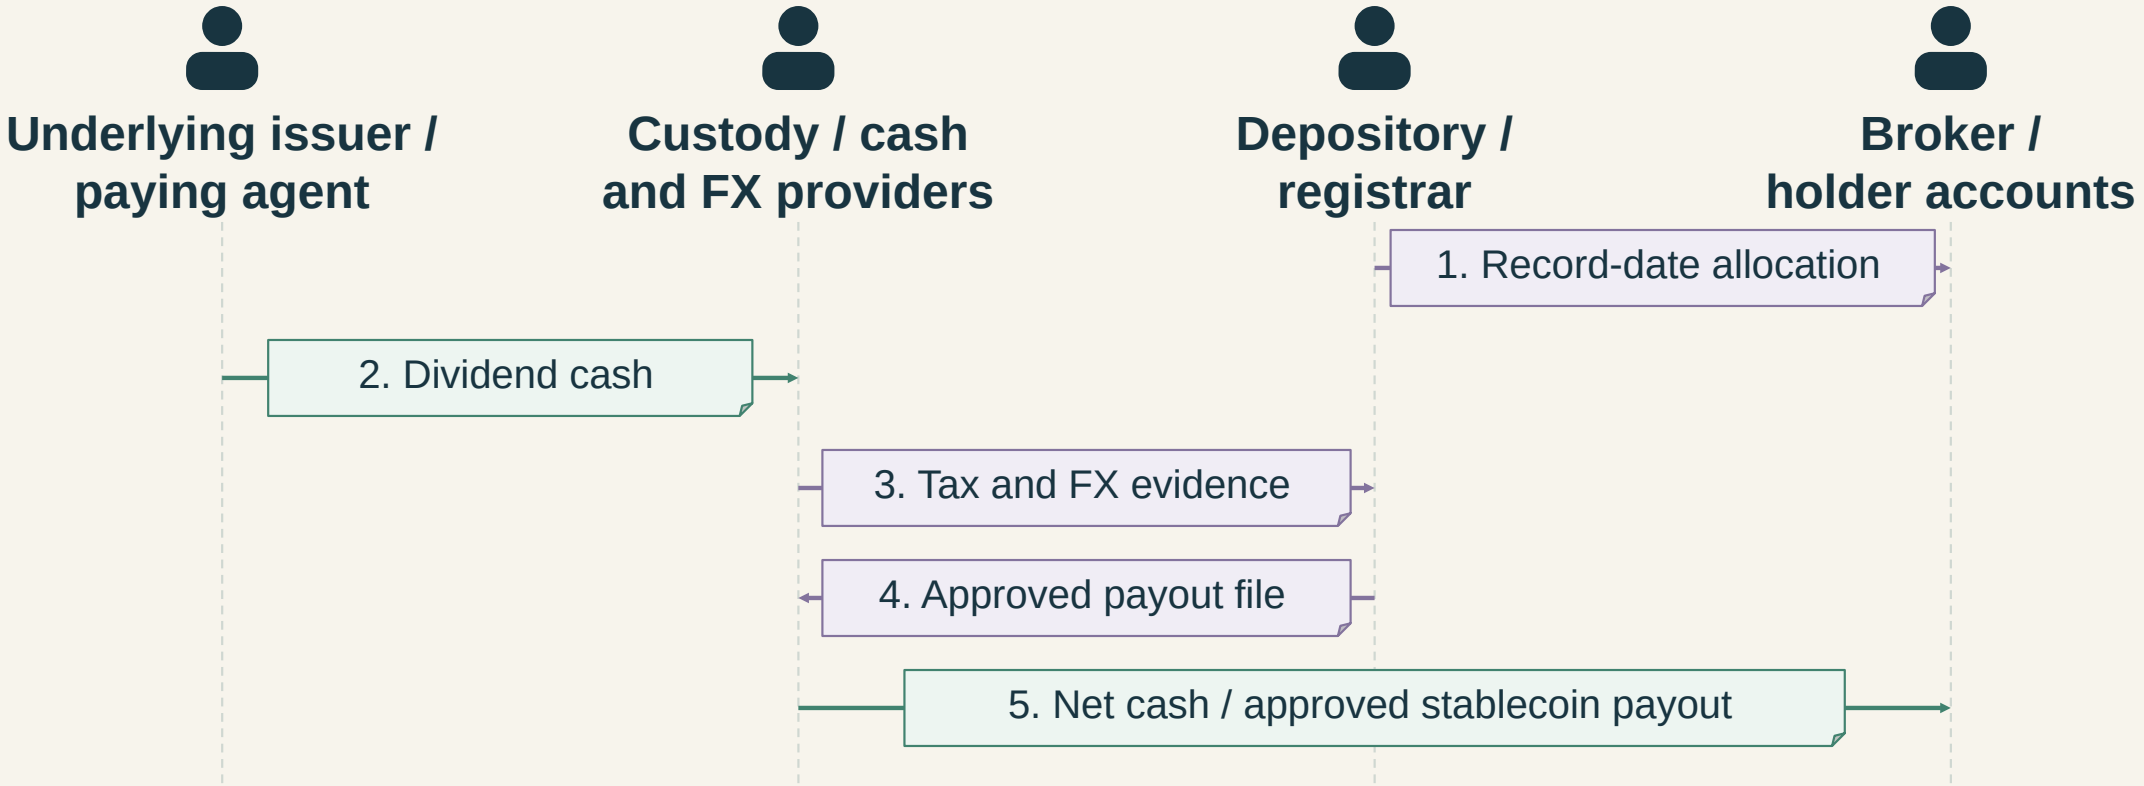

Dividends and holder distributions

Proposed dividend path. Programme terms set taxes, fees and eligible payout currencies.

Blue = securities

Purple = instructions and confirmations

Green = cash or stablecoins

Example: 25 receipts × 0.01 × US$1 dividend per share = US$0.25 gross, before tax, fees and FX.

Production readiness starts with clear ownership

01

Rights and permissions

Launch jurisdiction, legal receipt rights and distribution permissions

02

Backing and controlled supply

Settled custody proof before minting and supply reconciliation

03

Contract and key governance

Named operators, key recovery, contract audit and upgrade approvals

04

Launch certification

USDC certification and separately approved RedCoin investment access

Receipt state connects to verified cash evidence

Shared receipt state

Approved participants share receipt supply and transfer states. Custody evidence gates every mint.

Cash-asset and FX controls

Each settlement identifies its cash asset, network and currency. FX quotes carry an expiry time and counterparty.

Adoption case

Validate funded-to-invested conversion and repeat use with distribution partners.

Product foundation and next commercial proof

Completed design work

Receipt concept and lifecycle models
Executable trade and ledger test harness
USDC / RedCoin target architecture

Next commercial evidence

Sponsor and distribution discovery
Native USDC terms and HSBC access
Paid programme mandate

Current stage

Pre-launch product development.
Receipt permissions and cash-rail terms remain ahead.

A launch plan with measurable gates

Roles to contract

Programme partners

Global issuer, registrar and custody
Stablecoin / FX settlement partners
Jurisdiction-specific counsel

Distribution partners

USDC wallet ecosystem distributors
RedCoin investment-access partners
Broker and liquidity agreements

Timeline starts at funding close.
Each gate requires partner acceptance.

Proposed milestones from funding close

Months 0–6

Anchor sponsor and cash-rail terms

Launch jurisdiction, native USDC and RedCoin access

Months 7–12

USDC route and receipt certification

Custody, cash finality and audited contracts

Months 13–24

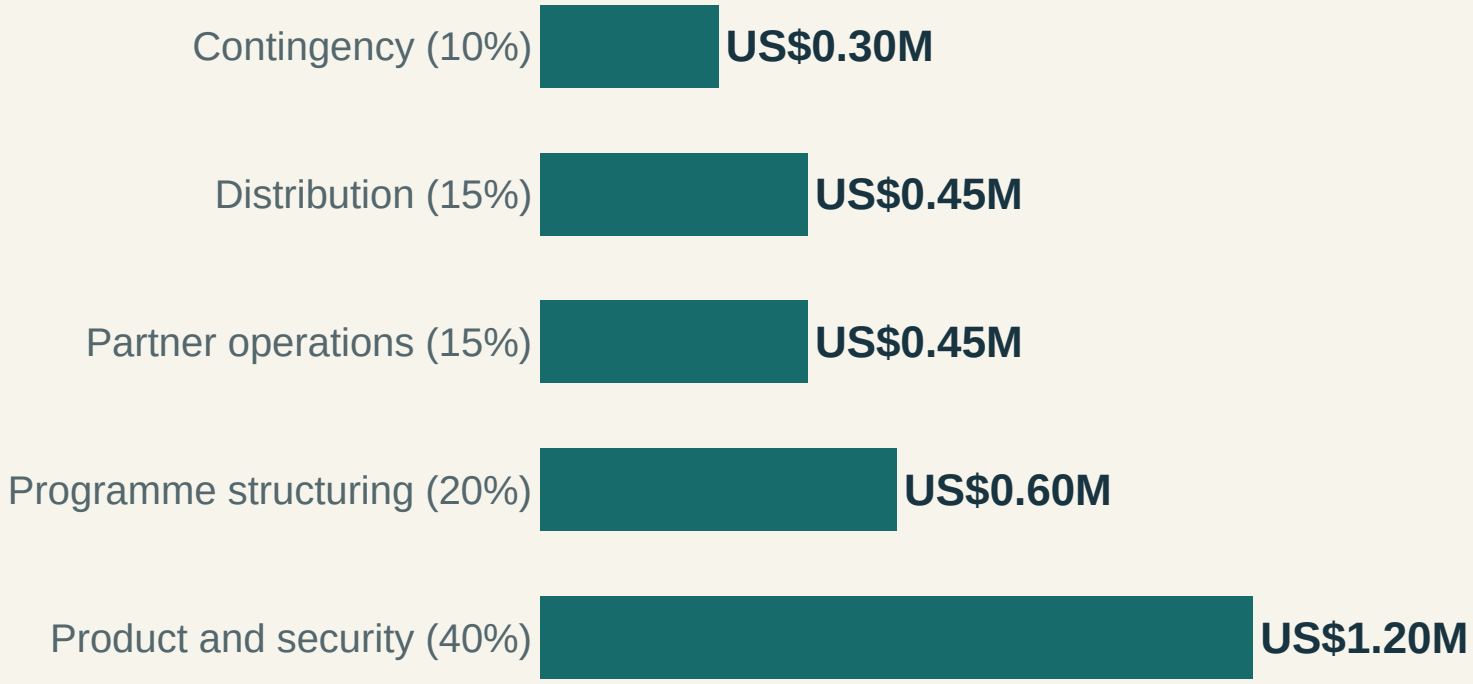

Launch and expand eligible distribution

5 series, 2 brokers, 2 LPs. RedCoin access gated.

Permissions and signed cash-rail terms determine rollout.

US$3 million expansion round

Proposed use of funds. Itemized spending and allocation reconciliation appear on slides 34-35.

24 months

planning horizon

US$125,000

per month, including reserve

US$112,500 fixed spending
+ US$12,500 reserve equivalent
per month over 24 months

US$2.70M fixed budget + US$0.30M contingency. Inventory, regulatory capital and settlement liquidity are separate.

How US$3 million becomes US$0.6 million

Planning adoption case. Customer revenue and variable costs arise in Year 2.

24-month cash bridge	US$ millions
Opening funding	3.00
Add customer revenue	0.45
Less fixed operating spending	-2.70
Less variable service costs	-0.15
Closing cash at Month 24	**0.60**

US$0.60M

Cash at Month 24

Includes US$0.30M

Unspent contingency inside the closing balance

US$3.00M + US$0.45M - US$2.70M - US$0.15M = US$0.60M

Revenue and variable costs: slide 33. Itemized fixed budget: slide 34. Raise allocation: slide 35.

Illustrative revenue, costs and funding need

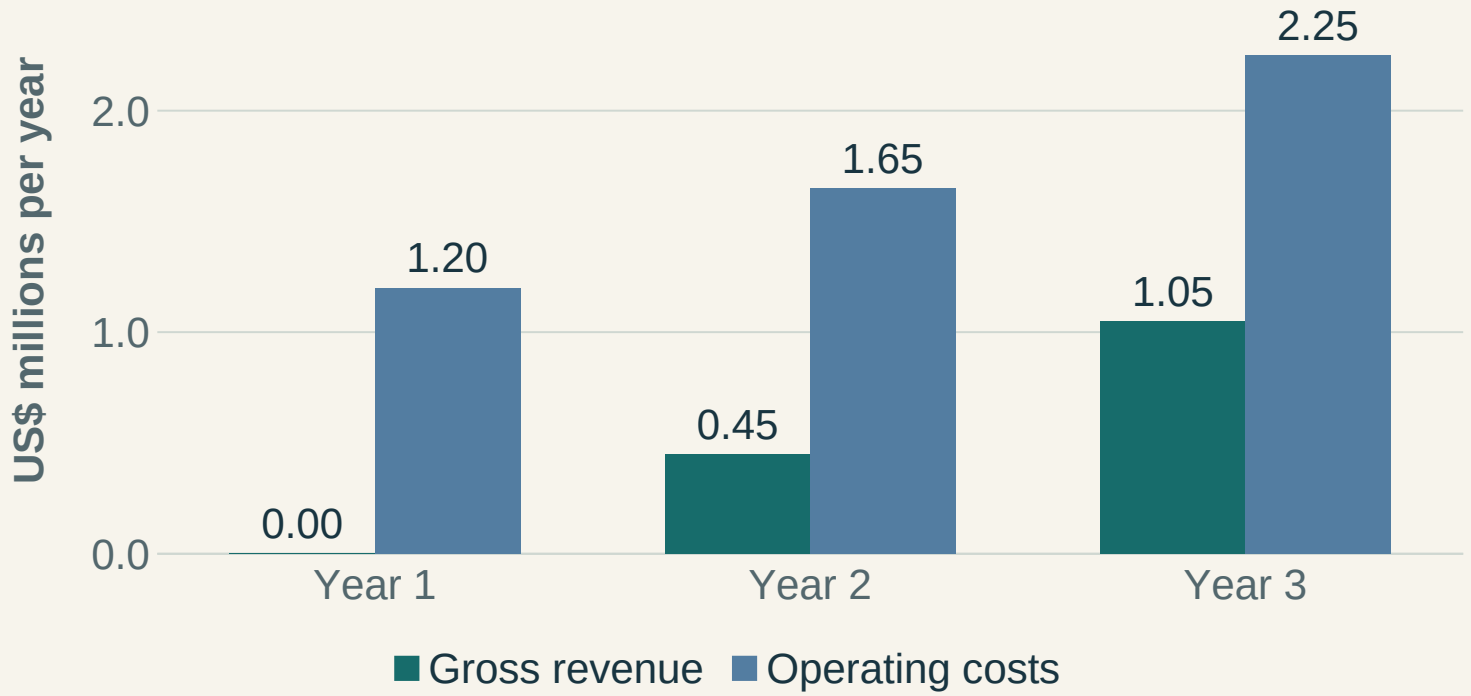

USD millions, years from funding close. All figures are planning assumptions.

US$0.6M

Cash remaining after Year 2 from a US$3M raise

US$1.2M

Annual operating cash deficit in each modeled year

Average assets: US$0M / US$100M / US$300M. Details: slides 33-35. Year 3 needs additional financing.

Year 2 revenue and operating-cost build

Illustrative USD planning case. Table amounts are US$000. Average serviced assets: US$100M.

US$450,000 revenue

Revenue	Basis	US$000
Servicing fees	US$100M × 0.30%	300
Sponsor setup	1 × US$150k	150
Total revenue		**450**

US$1,650,000 costs

Cost	Basis	US$000
Fixed budget	Itemized on slide 34	1,500
Variable costs	US$100M × 0.15%	150
Total costs		**1,650**

US$1.65M costs - US$0.45M revenue = US$1.20M operating cash outflow

Year 1 has no modeled revenue and US$1.20M fixed costs. All figures remain uncontracted planning assumptions.

Itemized fixed operating budget

Proposed budget in US$ thousands, subject to priced scope.

Fixed cost line	Year 1	Year 2	Years 1+2	Year 3
Engineering delivery capacity	300	300	600	420
Product and integration lead	150	150	300	180
Security audit and testing	60	120	180	120
Cloud, data and development tools	45	75	120	100
Securities counsel / programme docs	240	120	360	150
Compliance and licensing readiness	90	150	240	210
Operations and reconciliation capacity	90	150	240	210
Partner certification and testing	60	150	210	150
Partner development / account support	120	180	300	180
Market launch and investor education	45	105	150	80
Total fixed spending	**1,200**	**1,500**	**2,700**	**1,800**

Contingency and asset-based service costs are separate. Year 3 requires additional financing.

How the budget matches the US$3M raise

Functional view of the same itemized budget. Amounts are US$000.

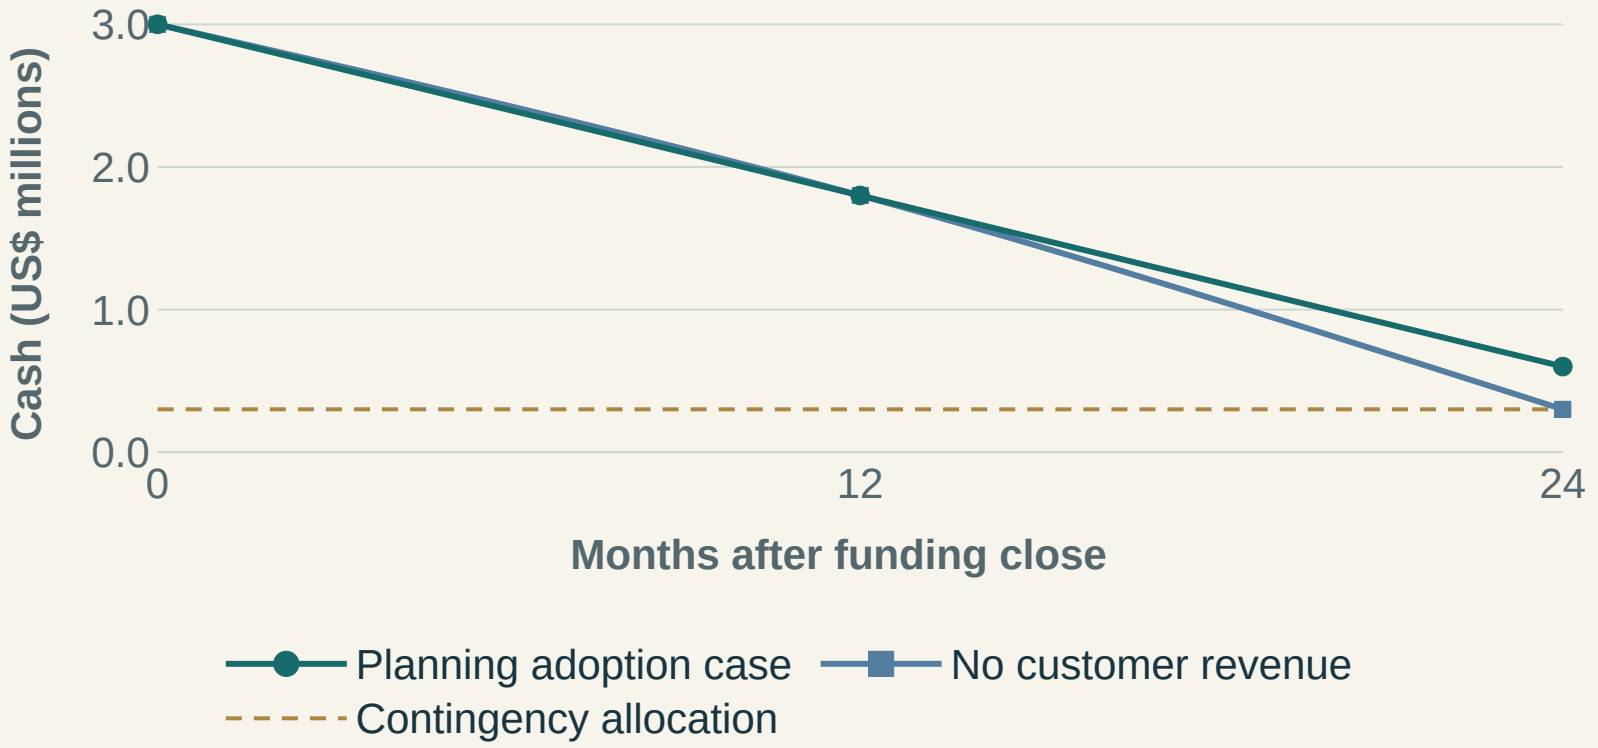

Use of funds	Year 1	Year 2	24M total
Product and security	555	645	1200
Programme structuring	330	270	600
Partner operations	150	300	450
Distribution	165	285	450
Total fixed spending	**1,200**	**1,500**	**2,700**
Contingency reserve	-	-	300
Total raise	**-**	**-**	**3,000**

Monthly equivalent: US$112,500 fixed + US$12,500 reserve = US$125,000

Reserve remains unspent. Year 2 variable costs of US$150k enter the cash bridge separately on slide 31.

Cash runway depends on adoption and scope

Illustrative annual endpoints. Both cases leave the US$0.30M contingency unspent.

At Month 24

US$0.6M

Planning adoption case

US$0.3M

No customer revenue

No-revenue case assumes no serviced assets or variable asset fees. Tax, minimum fees and capital remain unmodeled.

Launch risks and decision gates

Risk	Evidence required before expansion
Product and permissions	Launch jurisdiction, receipt rights and permissions
Backing, liquidity and FX	Custody proof, cash-asset limits and executable FX quotes
DLT and cash-asset risk	Contract audit, key recovery and cash-finality controls
Commercial adoption	Sponsor mandate, native USDC terms and HSBC access
Delivery and runway	Priced scope, operating budget and financing gates

We release capital against evidence and partner acceptance.

The relationships that make launch possible

The round funds product delivery and programme readiness while anchor partners supply market access.

Issuer / sponsor	A paid programme mandate, receipt terms and accountable registrar ownership.
Custody and cash partners	Backing evidence, approved USDC access and priced settlement and FX terms.
Broker and liquidity partners	Eligible distribution, an approved execution route and funded quoting capacity.
HSBC investment access	A decision on RedCoin product/channel access and the permitted integration path.

All relationships are proposed. Receipt inventory, regulatory capital and settlement/FX liquidity require separate arrangements.

D-SHARE

US$3 million for the first production programme

We are seeking investors and anchor partners for stablecoin-funded D-SHARE receipts.

Connextium.xyz / Finux Labs

connextium.xyz

Programme terms and investor rights

Proposed terms for counsel and sponsor validation. Final rights belong in binding programme documents.

Decision	Proposed Phase A design
Receipt unit	One programme unit with an approved share-per-receipt ratio
Backing	Settled underlying equity in an agreed custody arrangement
Holder rights	Distribution, voting, redemption and insolvency rights defined by contract
Execution and access	Authorized brokers and a permitted execution venue or broker route
Valuation and FX	USD planning basis, with separate HKD funding/FX quotes where approved
Fees and tax	Disclosed programme charges, withholding and payout conversion terms
Transfer and recovery	Eligible holders, recognized register, restrictions and governed recovery

The initial scope covers equity receipts. Options and any new exchange operation require separate plans and permissions.

Two funding assets, separate settlement controls

The approved cash asset, reference currency and executable conversion determine the payment quantity.

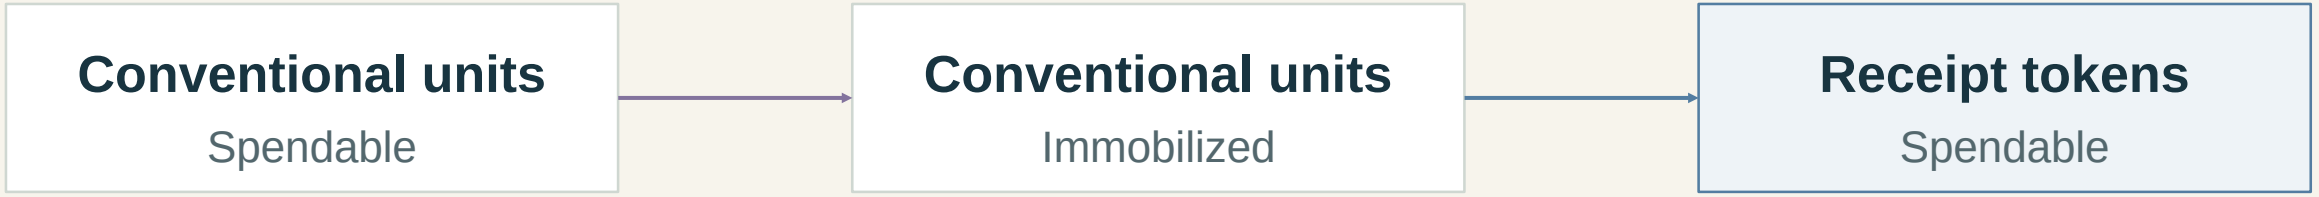

Control	USDC route	HSBC RedCoin route
Reference currency	USD	HKD
Access path	Approved native network/provider	Approved HSBC investment access
USD-valued trade	Execution value and charges	Executable HKD/USD quote with expiry
Finality evidence	Chain/contract and provider evidence	Agreed HSBC/provider confirmation
Activation gate	Asset, eligibility and route acceptance	Product/channel and interface acceptance
Receipt rights	Programme-defined receipt rights	Programme-defined receipt rights

HKD funding does not remove USD equity or FX exposure. D-SHARE support for either route remains proposed.

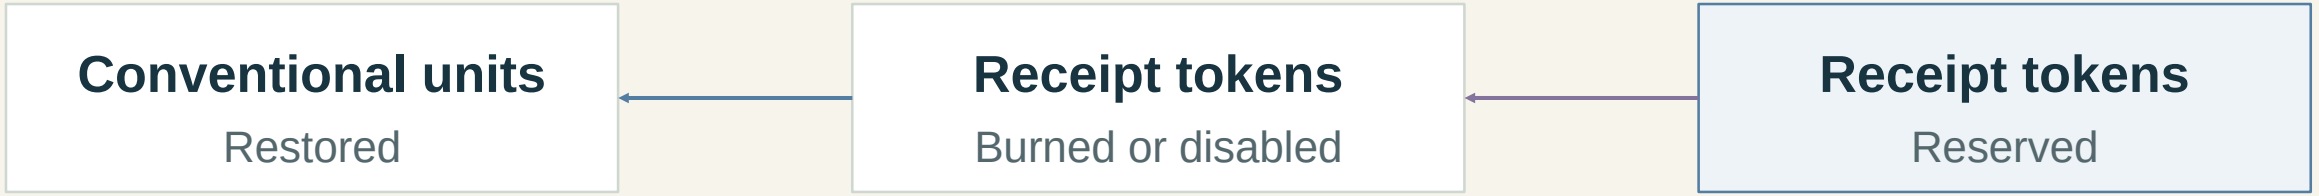

One claim across conventional and token forms

Proposed conversion controls. The legally recognized holder register governs the economic claim.

Conversion to token form

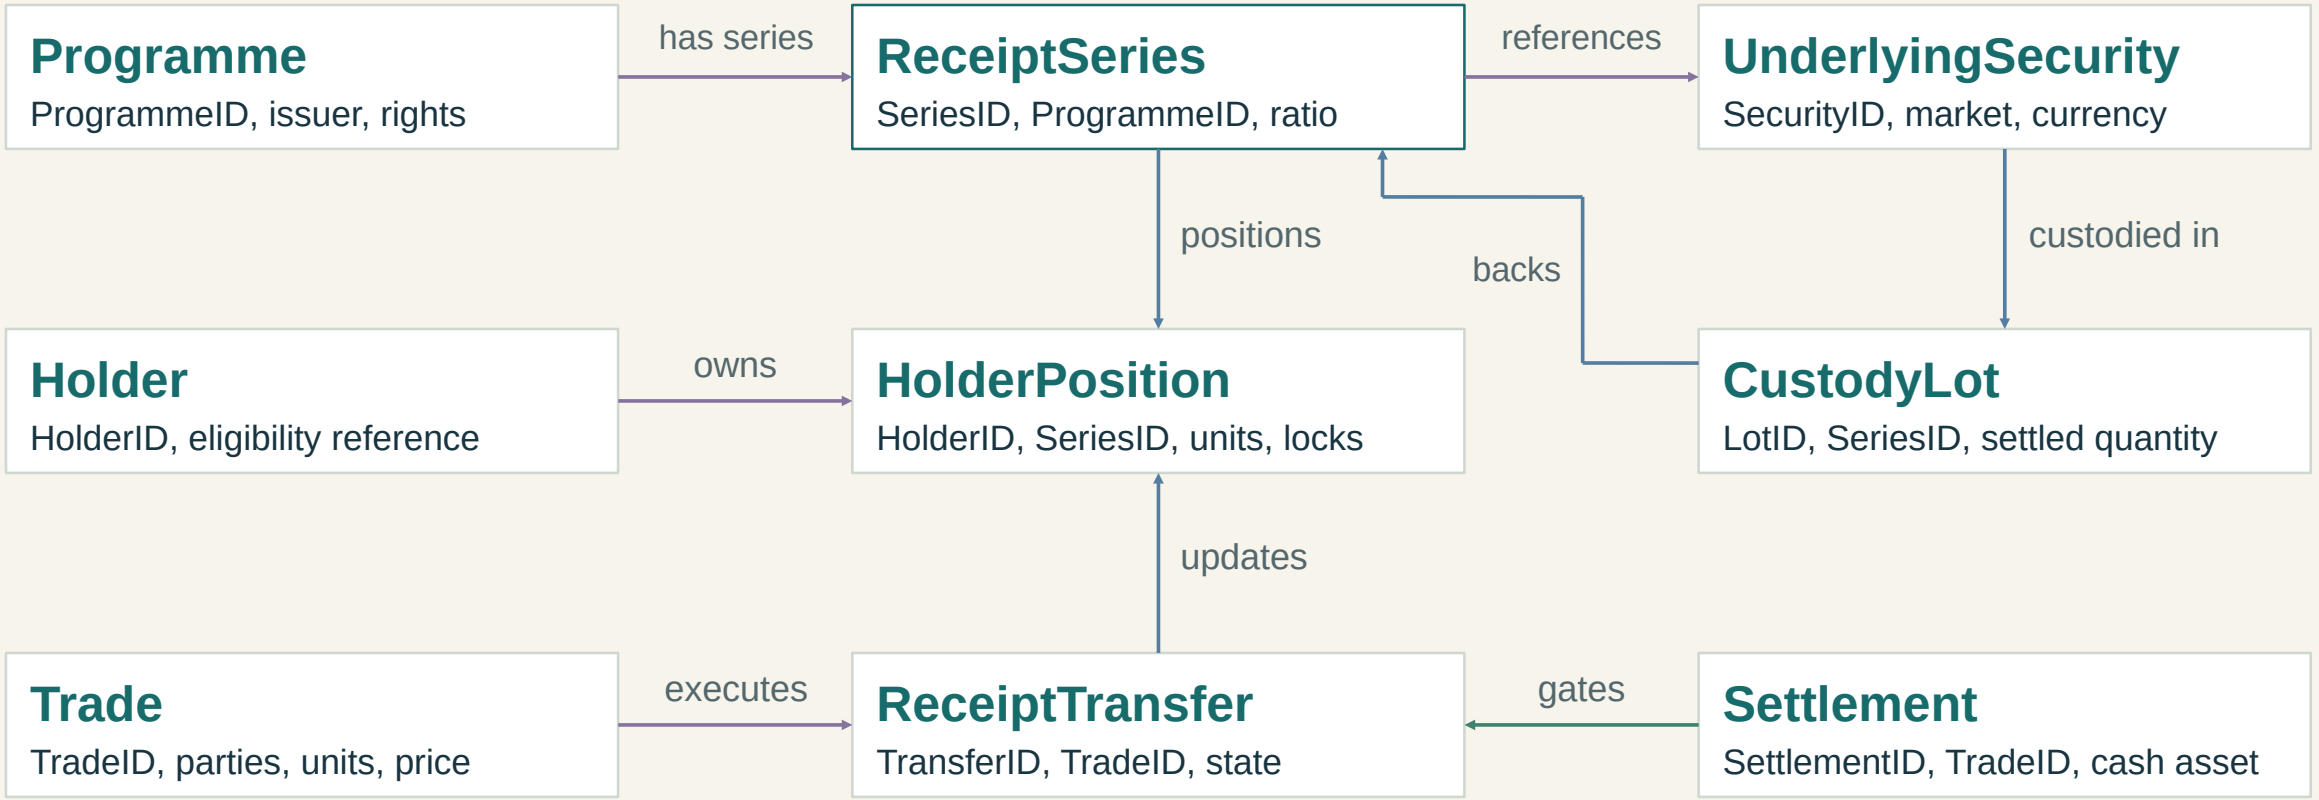

Conversion to conventional form

Until legal register recognition, any operational ledger mirror remains non-transferable. Spendable copies cannot coexist.

Business data across the trade lifecycle

Simplified relationship map. Identifiers connect programme rights to backing, holder positions and settlement.

Settlement also links PaymentInstruction, FXQuote/Execution and CashFinalityEvidence. Private identity stays off ledger.

The operating data repository

Proposed records and ownership. Each external institution remains accountable for its authoritative evidence.

Record group	Core contents	Authority and access
Programme reference	Rights, ratios, series, cash assets and policy versions	Issuer/registrar-approved reference data
Transaction store	Orders, trades, locks, cash instructions and FX execution	Restricted operational records and partner events
Holder register	Receipt supply, holder positions and recognized transfers	Registrar or legally recognized DLT record
Evidence store	Custody proofs, KYC references, approvals and confirmations	Restricted documents with integrity references
Finance and exceptions	Journal entries, distributions, reconciliation and cases	Named finance, compliance and operations owners

A shared ledger does not publish private documents. Retention, access rights and audit exports follow the chosen legal structure.

Liquidity and pricing operations

Proposed two-provider launch. Commercial terms must support executable quotes and an orderly exit route.

Party	Operating function	Terms to agree
Authorized participant	Create/redeem against confirmed backing and eligible receipt balances	Inventory funding, cut-offs, fees and minimum lot
Liquidity provider	Quote eligible receipt pairs and manage underlying/FX exposure	Quote size, spread policy, hours and suspension rules
Broker / approved venue	Validate accounts, execute orders and provide trade records	Execution rules, disclosures and error handling
Sponsor / oversight	Monitor programme price, backing and unresolved trading issues	Reference price method and escalation owner

Creation and redemption can support price alignment when counterparties and markets remain available.

Settlement exceptions and recovery

Agreed state transitions and named owners prevent an unresolved leg from becoming a duplicate transaction.

Exception	Required response	Proposed owner
FX quote expires before use	Re-quote and authorize before execution	Broker and FX provider
Cash final, receipt delivery fails	Hold units and enter the agreed recovery process	Controller and partners
Backing or supply mismatch	Pause affected supply/release and reconcile	Custodian and registrar
Duplicate or delayed event	Reconcile unique event IDs with the source	D-SHARE operations
Cash issuer / network disruption	Pause route under agreed limits and recovery rules	Cash provider and risk owner
Key loss or privileged compromise	Apply approved pause, key recovery and incident rules	Registrar / security owner

Coordinated inter-ledger settlement carries sequencing risk. Recovery terms and loss allocation require partner acceptance.

Launch acceptance criteria

Proposed acceptance matrix. Each control needs an accountable approver and documented evidence.

Workstream	Evidence before production	Proposed acceptance owner
Legal programme	Rights, register status and required permissions	Sponsor with securities counsel
Backing and supply	Custody proof and reconciled mint/burn records	Custodian and registrar
Cash and FX route	Approved asset, FX, finality and recovery rules	Cash/FX providers and risk owner
Technology operations	Audit closure, key recovery and incident rehearsal	Security and operations owners
Distribution and trading	Eligible accounts, execution route and liquidity	Sponsor and execution partners
Capital and delivery	Priced scope, runway and funded liquidity	Management / financing partners

These are release gates to satisfy. The deck does not claim programme approvals, signed partners or completed certification.

Adoption and operating measures

The first programme establishes baselines. Partners then agree targets and reporting frequency.

Measure	Definition	Decision it supports
Funded-to-invested conversion	Settled receipt buyers / eligible funded users	Investment adoption
Average serviced assets	Mean of daily programme asset values	Recurring fee base
Repeat investment	Investors with another trade in the agreed cohort	Retention
Settlement reliability	On-time finalized trades / accepted trades	Route reliability
Reconciliation exceptions	Open breaks by age, value and owner	Operations and risk
Realized contribution	Collected fees less attributable variable costs	Programme economics

No measured conversion, settlement speed, cost saving or retention result is available for D-SHARE today.

Commercial and cash-rail planning assumptions

USD planning model, 24 months. Partner quotes and jurisdiction-specific validation remain ahead.

Assumption	Planning value	What must validate it
Currency and raise	USD; US$3M startup raise	Financing terms and operating plan
Setup fee	US$150k per new sponsor	Sponsor willingness to pay
Annual servicing fee	0.30% of average assets	Pricing and disclosure terms
Variable service costs	0.15% of average assets	Partner quotes and minimums
Launch scope	5 series, 2 brokers, 2 LPs	Eligibility and signed agreements
Inventory / capital	AP / partner funding separately	Asset and cash liquidity terms
Cash assets	USDC (USD); RedCoin (HKD)	Native asset and channel access
FX policy	Executable quotes with expiry	FX counterparty and limits
DLT governance	Permissioned receipt register	Register status and governance

Targets remain uncontracted. The USD model needs current operating and cash-rail cost quotes.

Financial model detail

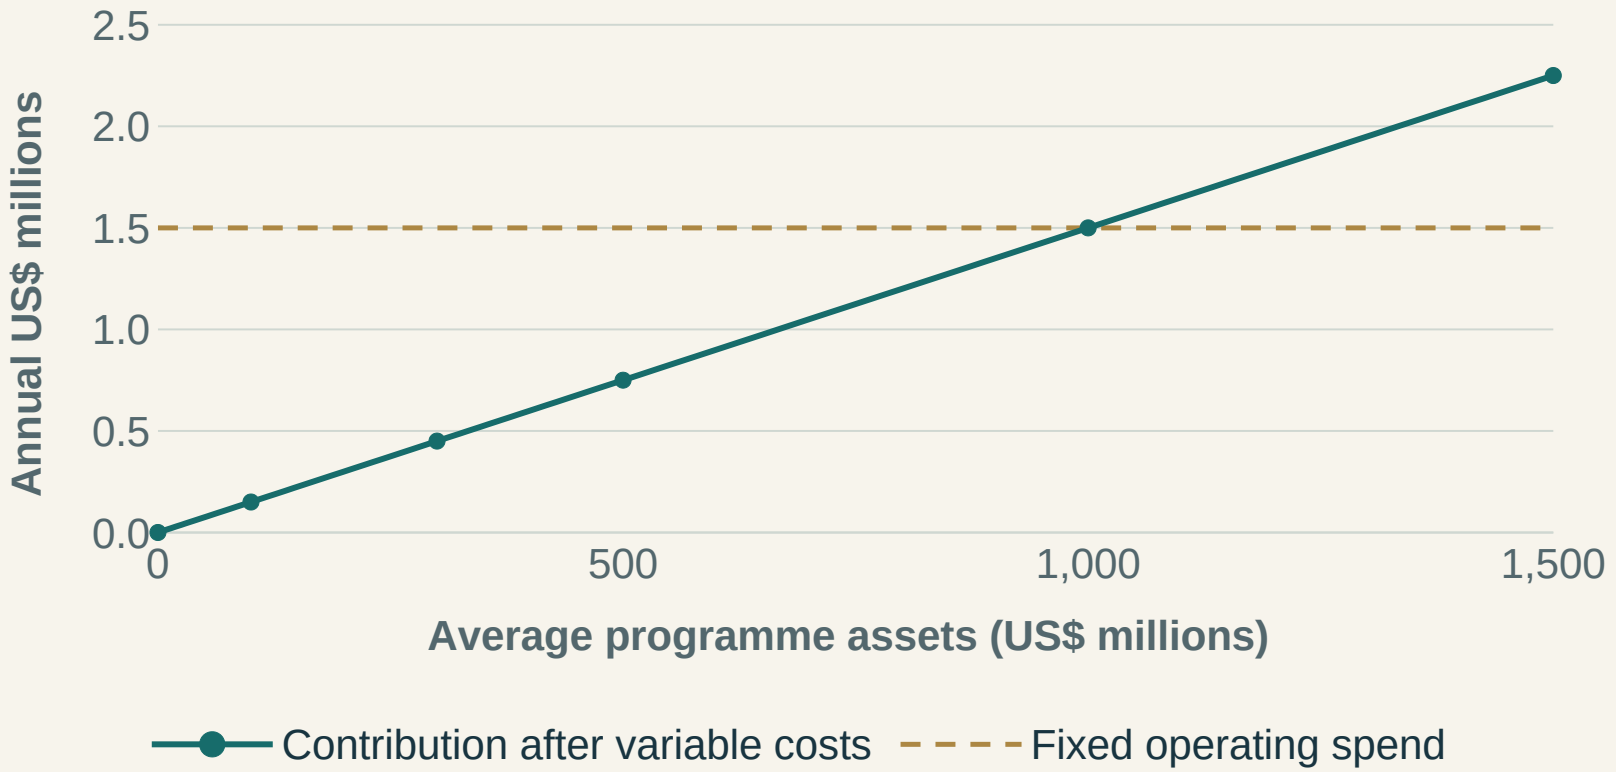

Illustrative USD millions, except sponsor count. Years begin at funding close.

Planning item	Year 1	Year 2	Year 3
Average serviced assets	0	100	300
New sponsors (count)	0	1	1
Recurring servicing revenue	0.00	0.30	0.90
Sponsor setup revenue	0.00	0.15	0.15
Gross revenue	0.00	0.45	1.05
Variable service costs	0.00	0.15	0.45
Fixed operating spend	1.20	1.50	1.80
Total operating costs	1.20	1.65	2.25
Operating cash result	-1.20	-1.20	-1.20
Cash before additional financing	1.80	0.60	-0.60

Fixed budget: slide 34. Year 3 needs financing. Tax, capital, cash timing and partner minimums remain unmodeled.

Recurring break-even requires US$1 billion of assets

Illustrative sensitivity. Setup fees excluded. Fixed annual operating spend assumed at US$1.5M.

US$1.0B

Average assets for recurring break-even

US$1.5M / 0.15%

0.30% fee less
0.15% variable cost

Asset demand, rail fees and FX terms can change break-even. No commercial price is contracted.

Contribution margin changes the asset requirement

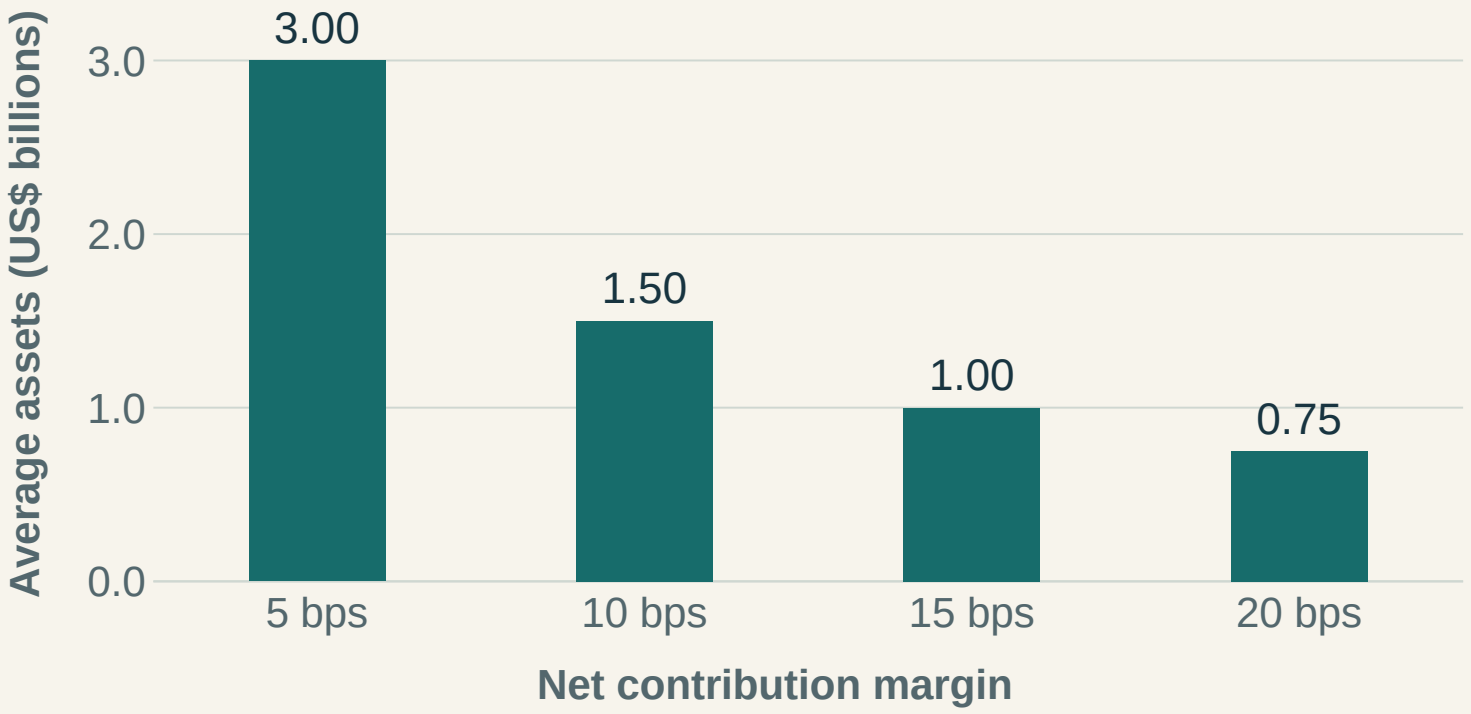

Sensitivity at US$1.5M annual fixed cost. Gross servicing price stays at 30 basis points.

15 basis points

Baseline contribution
30 bps fee less 15 bps cost

US$1.5B

Break-even assets if variable cost rises to 20 bps

Derived sensitivity, not a pricing quote. Fixed spend divided by contribution rate determines recurring break-even.

The first 90 days after funding

Proposed execution sequence. Early commercial evidence determines the approved build scope.

Period	Work and accountable role	Reviewable output
Days 1-30	Founder and counsel select a launch structure and engage sponsor/custody candidates	Jurisdiction decision and programme rights brief
Days 31-60	Commercial and operations leads price the native-USDC, custody and broker path	Draft programme terms and costed integration scope
Days 61-90	Product and risk leads agree data contracts, finality, recovery and delivery gates	Accepted build plan, revised runway and launch dependencies
Parallel RedCoin work	Founder seeks HSBC investment access and a permitted integration scope	Access decision and a separately gated integration plan

Major delivery commitments follow a credible sponsor mandate and a priced operating path.
